

# Using Mongoose Pre Read

## Things I need to know before this session

- Understanding of Node.js
- Understanding of Async Await
- Mongo DB locally installed and running

## What will be taught in this session?

In this session, we are going to focus on below points –

- Create Schema
- Create the database in MongoDB programmatically
- Create the collection in MongoDB programmatically
- Putting inbuilt constraints on the model schema
- Creating custom validators for the model schema
- CRUD operations with MongoDB using Mongoose

## Tech

- Node.js
- mongoose

## Installation

This app requires Node.js v14+ to run.

## How are these concepts being used in the industry for building applications?

There are multiple companies using Mongoose

- Accenture.
- Stack.
- platform-stack.
- Scale.
- Unibuddy.
- PedidosYa.
- Wunderflats.
- Winds.

In this session, we will learn about Mongoose and an overview of the next sessions where we will create a schema from scratch.
